Recruitment Office
RedHat Inc
Westford, MA

Dear Recruitment Office,

My name is Daniel Garcia. I am a computer engineer at University of Massachusetts Dartmouth, and I am applying for the internship position of Security Engineering. I found this opening on the linkedIN website as the position related my interests and experiences.

I have been interested in RHEL and the concept of Open Source since I began college. I have been so lucky to be a part of community behind Open Source. When I was introduced to Linux I started on CentOS and forced myself to try a command line environment instead of the usual GUI. I quickly installed apache using the usual yum commands and was very impressed how simple the process was. The interactions I had with CentOS persuaded me to join the Linux community. It was amazing how a company could let the world view and make modifications to their source code knowing that it would benefit everyone. Today the world runs on RHEL and yet it seems to me that so few people know it. An opportunity to work at RedHat would be an opportunity to give back to the community that gave me so much. Over the summer, I had the opportunity to work at General Dynamics Mission Systems in Taunton MA. There I was able to work with RHEL and automate many aspects of their security and software integration. Thanks to the Linux community, I have been inspired to pursue a career with Linux and do my part to give users the freedom they deserve.

I would like the opportunity to interview with you. I would be glad to provide any additional information as needed. Thank you for considering me for this position.

Kind Regards,

Daniel Garcia
